

Smart storage solutions for bathrooms and laundries

Bathrooms and laundries are often compact and require strategic use of space in order to provide optimal storage and ease of access to numerous smaller items. Hettich provides a range of quality products ingeniously designed to ensure that your bathroom and laundry, no matter their size, are awash with space.

Folding doors Pull-out storage

WingLine 770/780 folding doors can be used with aluminum frame profiles and provide both good looks and smooth, effortless access to cupboards. A combi pull-out shelf unit is a wonderful storage option for any bathroom.

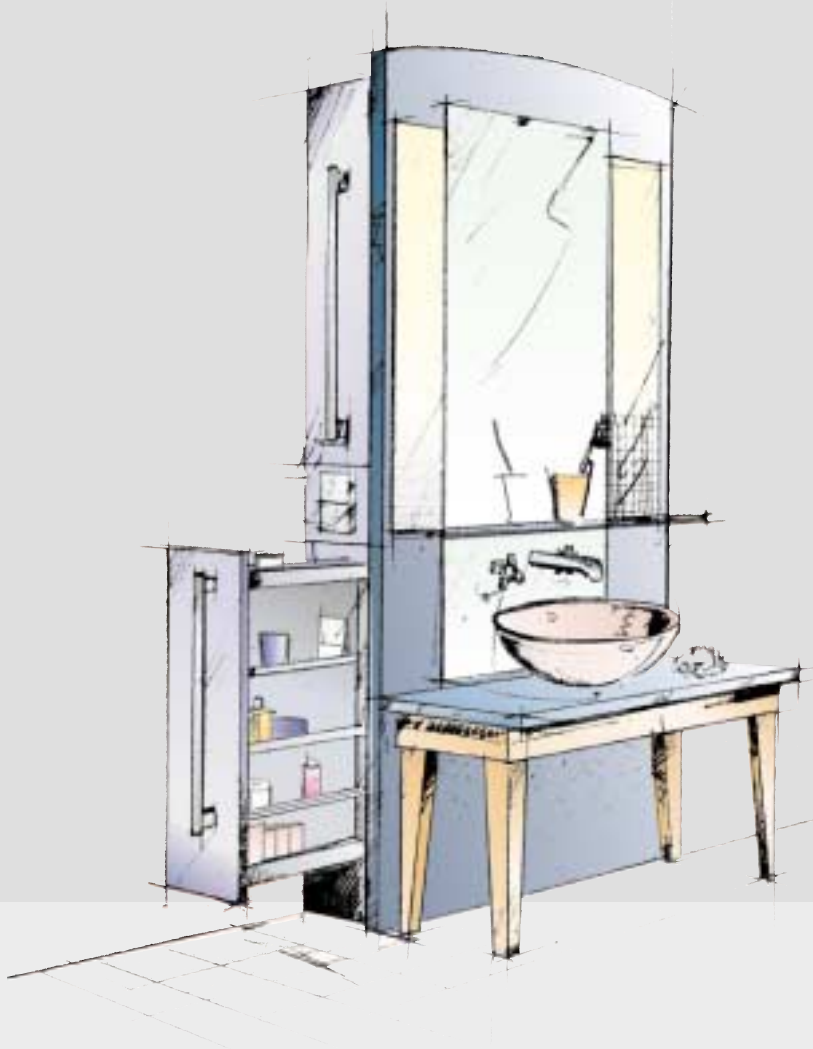

Small details count

Unimat hinges are small, sleek and unobtrusive and will move silently and smoothly every time you open or close a cupboard for years to come.

Concealed vanity storage

A slim cabinet behind the vanity unit can cleverly contain easily accessed storage in pullout shelving units. At the top is an Org@Tower vertical drawer, while the lower unit is a 3-tier pullout unit. The unit is rounded off with Base shelving brackets for glass shelving and Hettich decorative legs which support the free-standing unit.

Smart shelving is a handy and attractive addition to the bathroom. Hettich provides three shelving bracket options for different looks and applications: Base shelving brackets for glass shelves, Sailor shelf supports in high-gloss chrome, stainless steel, white or black, and Titan shelf supports for concealed shelf mounting. Shown here is the Base shelving bracket.

Revolving storage

A TurnLine carousel near your basin unit is decorative, eye-catching and functional. These useful fully rotatable glass storage shelves on a high quality steel rail provide convenient access in no time to items you use every day.

Clever extras

Even the smallest bathroom has room for everything with Hettich's special units such as the TurnLine carousel, Badero tall pull-out unit and TurnPanel, a storage unit that swings around on a central column. Towel rails are also an essential in any bathroom.

Drawer storage systems

InnoTech drawers not only glide in and out of your vanity unit effortlessly but come with a range of internal storage units to ensure all your toiletry items are easy to find. Add an EasyLock locking system to drawers that contain medicine to ensure the safety of small children.

Wire pull-out units for bathrooms

The slim-line pull-out unit is the ideal solution in bathrooms where every inch counts.

Badero and Badero Compact

Keeps the bathroom neat and tidy – the full-extension unit reveals the entire cabinet content, making everything accessible.

The hidden laundry

Wing Line 230 full-height folding doors have no bottom track for ease of installation and disguise a compact, built-in laundry from view when not in use.

Laundry storage

Options for efficient laundry storage include a built-in clothes basket, a pull-down all purpose sink shelf for holding washing powders and soaps as well as an automatic pull-out ironing board which is hidden inside the drawer cabinet.

Ensuite storage

The Top Line 22 and 110 sliding door systems are ideal for concealing storage space in ensuite bathrooms. Internal systems can include InnoTech drawers and Minisys mini fluorescent built-in lighting.

Wardrobe and ensuite storage

The Wing Line 220 top-running folding door fitting enables the easy running of heavy tall doors providing access to a large interior cupboard space. Hettich provides numerous fittings for wardrobe organisation ranging from wardrobe tubes, tie and belt bracks, trouser holders and shoe racks.

With the Wing 77 fitting the whole door set moves freely to and fro providing maximum access to top and tall cupboard interiors.

Laundry/ broom cupboard

Tall pull-out units or pantries need not only be restricted to kitchens, but can also be used in laundry and broom cupboard applications thereby providing access to cleaning and washing utensils.

A place to stow the vacuum cleaner, brooms, mop and other cleaning implements is essential. Hettich products prevent these items becoming entangled and difficult to access: two support rails are screw-fastened to the cabinet side panels and/or inside the door. The storage elements shown are then simply clipped onto the support rails.
